Organisation for Economic Co-operation and Development

The OECD is a unique forum where the governments of 30 democracies work together to address the economic, social and environmental challenges of globalisation. The OECD is also at the forefront of efforts to understand and to help governments respond to new developments and concerns, such as corporate governance, the information economy and the challenges of an ageing population. The Organisation provides a setting where governments can compare policy experiences, seek answers to common problems, identify good practice and work to co-ordinate domestic and international policies.

The OECD member countries are: Australia, Austria, Belgium, Canada, the Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Korea, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, the Slovak Republic, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. The Commission of the European Communities takes part in the work of the OECD.

OECD Publishing disseminates widely the results of the Organisation's statistics gathering and research on economic, social and environmental issues, as well as the conventions, guidelines and standards agreed by its members.

This work is published on the responsibility of the Secretary-General of the OECD. The opinions expressed and arguments employed herein do not necessarily reflect the official views of the Organisation or of the governments of its member countries.

 1. Estimates are based on national health interview surveys for most countries (self-reported data), except for Australia, the Czech Republic (2005 only), New Zealand, the United Kingdom and the United States where estimates are based on the actual measurement of weight and height. This difference in survey methodologies limits data comparability as estimates arising from the actual measurement of weight and height are significantly higher than those based on self-report.

National Accounts of OECD Countries, OECD, Paris, 2007.

1. According to the 1993 System of National Accounts and the International Standard Industrial Classification (ISIC), Revision 3 (1990), value added is estimated at basic prices and includes FISM.

2. Value added estimated at factor cost.

3. Value added is estimated approximately at market prices.

4. Value added is estimated at producer's prices.

5. According to the 1968 System of National Accounts.

6. For Manufacturing: contribution to GDP instead of value added. For Services: includes Government enterprises, Sanitary and similar services included in industry.

Energy Balances of Non-OECD Countries, IEA, Paris, 2007;
Main Economic Indicators, OECD, Paris, 2007.

1. These figures are based on an assumption of 100% efficiency for hydro-electric, 33% for nuclear and approximately 10% for geothermal plants.

2. Includes hydro, geothermal, solar, wind, combustible renewables, waste and international trade in electricity.

3. Million tonnes of oil equivalent.

4. Total primary energy supply (in Mtoe) divided by GDP (in constant prices, 2000 USD).

- Nil or negligible.

+ Growth of more than 500%.

Figures in italics are provisional.

Energy > Energy: production, 2005¹

Energy Balances of OECD Countries, IEA, Paris, 2007;
Energy Balances of Non-OECD Countries, IEA, Paris, 2007.

1. These figures are based on an assumption of 100% efficiency for hydro-electric, 3.3% for nuclear and approximately 10% for geothermal plants.

2. Includes hydro, geothermal, solar, wind, combustible renewables, waste and international trade in electricity.

3. Million tonnes of oil equivalent.

- Nil or negligible.

Figures in italics are provisional.

Energy Balances of OECD Countries, IEA, Paris, 2007;
Energy Balances of Non-OECD Countries, IEA, Paris, 2007;
Main Economic Indicators, OECD, Paris, 2007.

1. CO2 emissions are calculated using the IEA energy balances, the IPCC Sectoral Approach and the default emissions factors from the Revised 1996 IPCC Guidelines for National Greenhouse Gas Inventories. They may differ from National Communications submitted by the parties to the UNFCCC.
2. Includes industrial waste and non-renewable municipal waste.

Figures in italics are provisional.

GDP growth

Average annual real change, % 1996-2006

Economic growth in the OECD area grew by an average of 2.6% per year in the 10 years to 2006, unchanged from the period to 2005 but slightly slower than five years ago. Ireland's real growth was the fastest again, exceeding 7%, followed by Luxembourg with 5.1%. Average growth reached over 4% in seven other countries, while four countries posted growth of below 2%, three of these being G7 countries. Canada and the US were the only G7 economies to grow faster than 3%. Comparing the overall pattern to 2006 with the average recorded five years earlier in 2001, France has improved its average score to above 2%, though remains below the OECD total. Whereas in the decade to 2001, some 16 countries performed below the OECD total, in the latest period that number has shrunk to 10.

GDP per capita

USD, using current PPPs, 2006

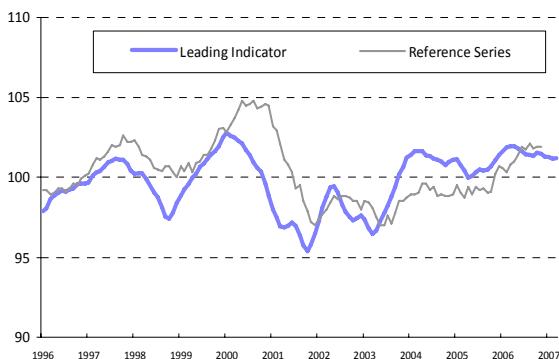

GDP per head exceeded \$30,000 in the OECD for the first time in 2006, compared with an average of around \$29,000 in 2005. That is an increase of over \$5,000 per head compared with five years ago. Luxembourg led the field again, bolstered by its transborder services workers, with nearly \$77,800, up from \$68,000 in 2005 and well ahead of Norway, the US and Ireland where GDP per head was over \$40,000. Norway's high position reflects buoyant oil and gas sector revenues, and Ireland's its large foreign sector (see "GDP and GNI" at www.oecdobserver.org). Italy is the only G7 country below the OECD total. GDP per head exceeded \$30,000 in 19 OECD countries, unchanged from 2005. In 2002, only seven countries exceeded that amount. GDP per head in 2006 was below \$20,000 in just five countries, with Turkey alone with less than \$10,000.

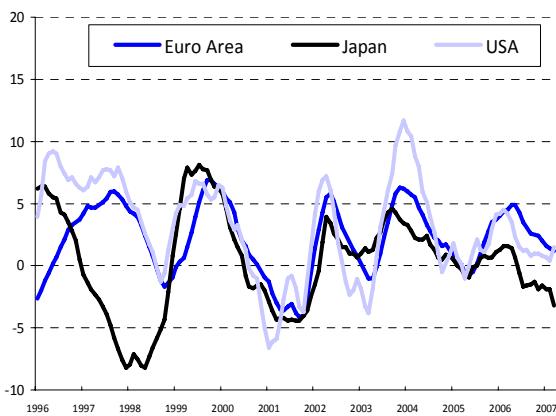

Forecasting with leading indicators

January 1996-March 2007

Total OECD - ratio to trend

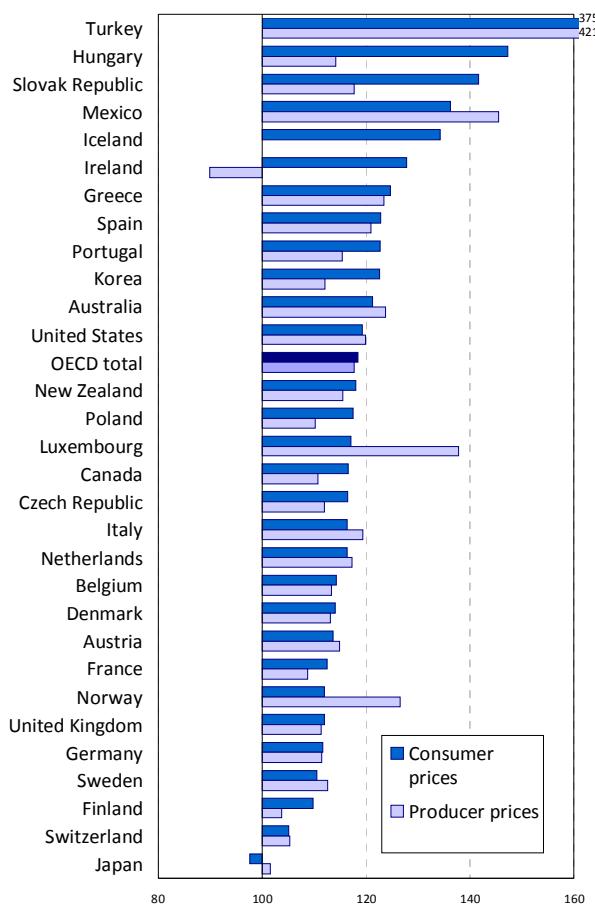

Regional indicators - trend restored

Economic forecasters generally have little difficulty following established trends—that a recovery will continue, for instance. They may even warn about a deterioration in the business cycle. But pinpointing the timing of a turnaround is harder. The OECD's composite leading indicators (CLIs) serve as a guide for short-term forecasters looking six to nine months ahead. By examining forward-looking indicators such as building permits, long-term interest rates and order books, the OECD CLI reveals possible upcoming peaks or troughs in activity. The graph shows these turning points and compares them with actual outturns; the match is close. Recent leading indicators have pointed to an overall easing in activity, including in Japan for instance, but a slight near-term up-tick in the US. Both are consistent with the OECD's latest *Economic Outlook* No 81 (June 2007, available at www.oecdbookshop.org).

Inflation

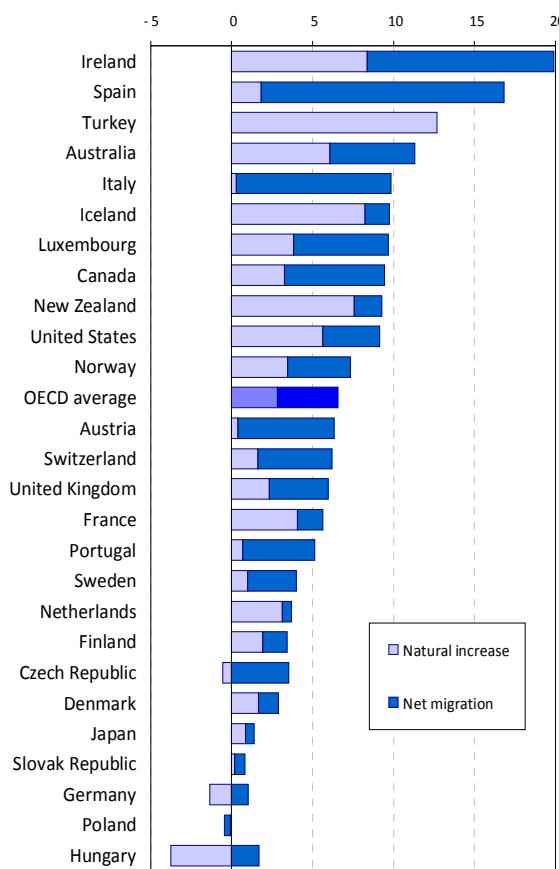

Consumer and producer price indices
March 2007, January 2000 = 100

Not long ago deflation was the conversation on many economists' lips. By end 2003, inflation had sunk to 2% on average and stood at below 3% in 24 OECD countries. In the US it stood at 1.9% for instance. However, in the year to June 2006 US inflation had risen to over 4%, hauling the OECD area above 3%. In Australia where inflation has also been relatively high, producer price inflation stood at nearly 10%, the highest rate outside Turkey. Consumer price inflation was well below the OECD area in France, Germany and Japan, three countries where producer price inflation was also relatively low. Euro area inflation was on the whole quite low, at 2.3%, but climbed to over 8% in non-EU Iceland. Inflation has been variable in the BRICS countries (including South Africa), ranging from as high as 9.8% in Russia down to zero in China.

Components of population change

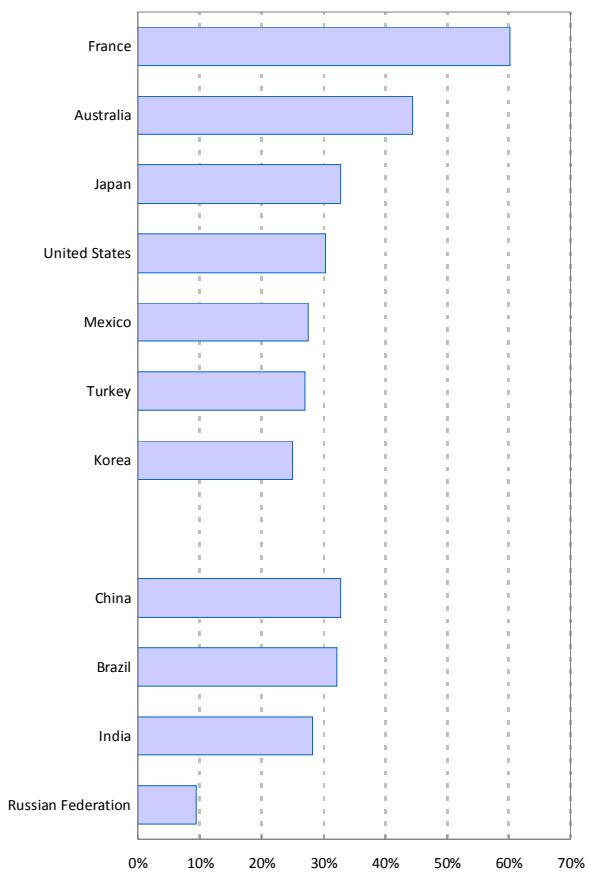

Per thousands persons in the population, 2005

Recent increases in international migration to OECD countries are part of an historic trend. Several developments have influenced these population movements, from post-war reconstruction and the end of the colonial era, to the oil crisis in 1973, the fall of the Iron Curtain, and the baby boom. Demographic and economic imbalances between OECD and less developed countries has also been influential. Since the 1970s, the net migration rate within the OECD has been increasing, with international migration contributing more to population growth, compared to natural increase (the excess of births over deaths) with each passing year. In fact, net migration into the OECD area averaged 790,000 persons per year from 1956 to 1976, 1.24 million per year from 1977 to 1990 and 2.65 millions per year thereafter up to 2003.

Minimum wages

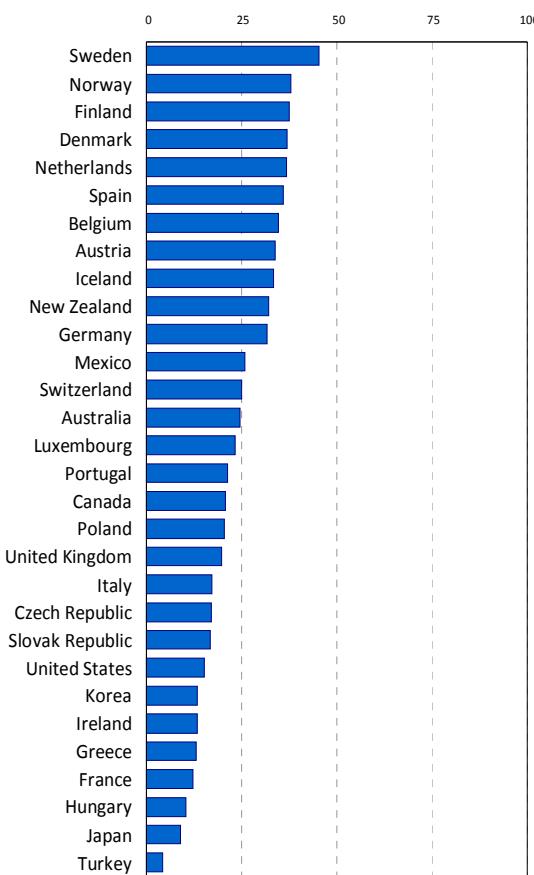

Ratio to gross average manufacturing wages, 2005

Minimum wages and wage floors are a feature of many countries, which if set properly, can improve equity, take-home pay and labour participation. They were introduced in New Zealand in 1894, followed later by Australia, and the US in 1938. Japan and Korea have minimum wages, as do France, Hungary, Spain, Turkey and several other European countries. Ireland and the UK (not for the first time) introduced minimum wages in the 1990s. Rather than a national rate, Austria, Germany, Italy and Scandinavian countries have traditionally preferred collective agreements for sectors and occupations. Similar floors or minimum wages also exist in Brazil (since 1940), India (1948), Russia (1993) and China (1994). Seen against average wages, the rate in three of them are comparable with the OECD. See *OECD Employment Outlook* 2007 and *OECD Observer*.

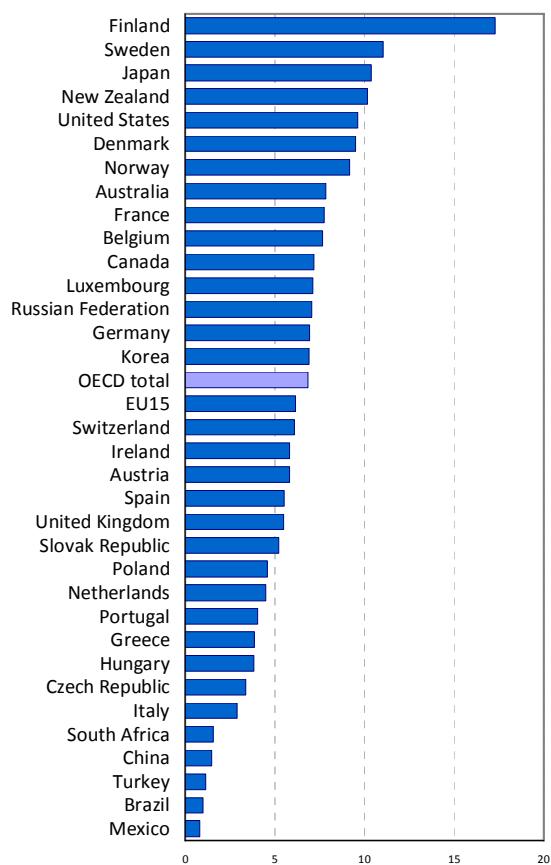

Women in parliament

OECD countries, 2006

Women political leaders are a rarity in OECD countries, but did you know that men still vastly outnumber women in all the world's parliaments? Nor can country differences in wealth explain much, for as a neat little OECD booklet called *Women and Men* points out, women hold close to half the seats in Rwanda and Sweden and about a third in the Nordic countries, Cuba, Costa Rica and Argentina. In nine OECD countries at least a third of parliamentary seats are held by women. The Nordic countries and the Netherlands stand out, with more than 35%. In most OECD countries, though, women hold under a quarter, with 15% or less in Italy, Japan and the US. *Women and Men* is available free at www.oecd.org/gender

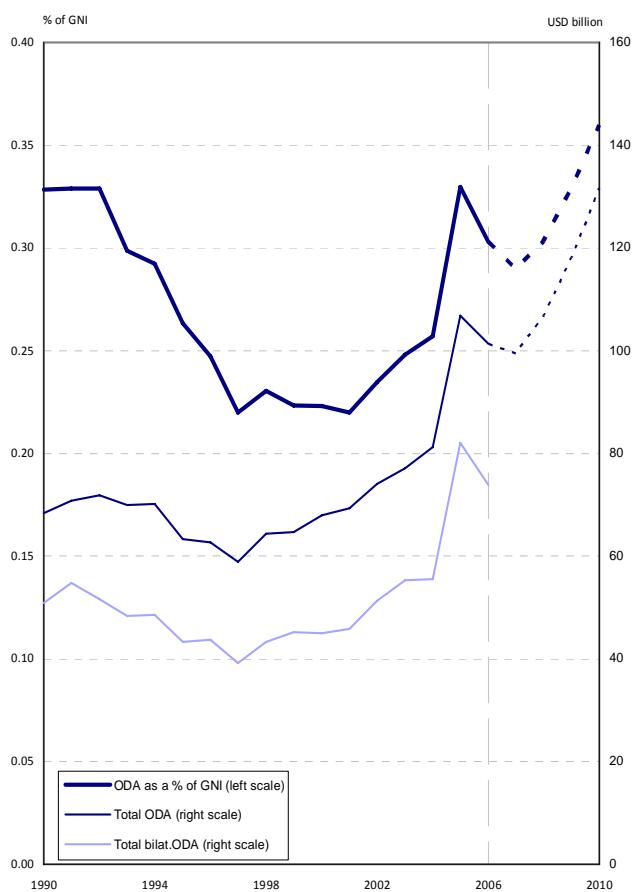

Researchers per thousand employed, full-time equivalent, 2004 or latest available year

Researchers are professionals engaged in the conception and creation of new knowledge, products, processes, methods and systems, spanning civil, military and business interests. Latest figures show nearly 4 million R&D professionals in the OECD area, of which about two-thirds in the business sector. That makes about seven researchers per thousand employees in the OECD area, compared with 5.8 per thousand in 1992 for instance. The number of researchers has increased over the last two decades. Finland, Japan, New Zealand and Sweden have the highest number of research workers per thousand persons employed. Outside the OECD, China has also seen growth, but at 1.2/1000 in 2004, remains relatively low. See OECD (2006), *Main Science and Technology Indicators*, OECD, Paris.

Development aid

Official development assistance, 1990-2010

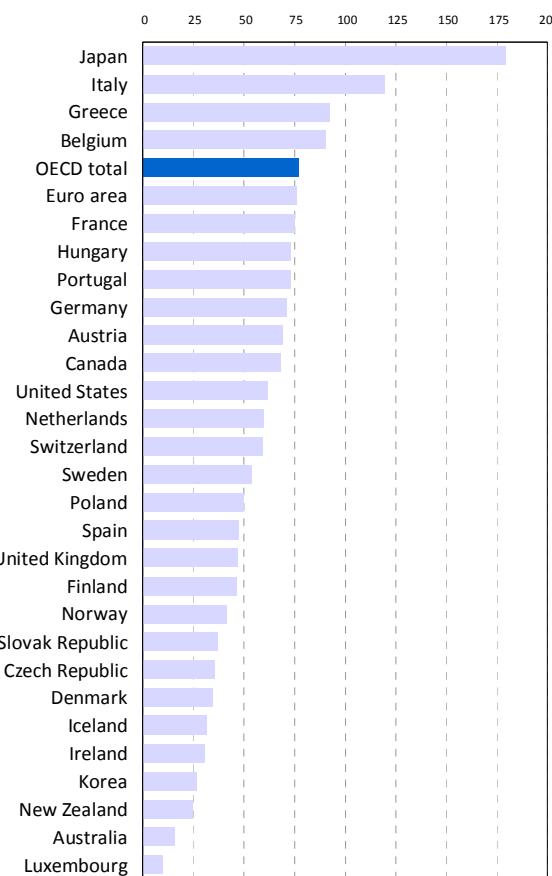

After several years of encouraging increases, development aid slumped in 2006, the first fall in real terms since 1997. The 22 member countries of the OECD Development Assistance Committee (DAC), the world's major donors, provided \$103.9 billion in aid in 2006, down by 5.1% from 2005 (constant 2005 dollars). Some \$19.2 billion was in debt relief, notably to Iraq and Nigeria. Excluding debt relief, other forms of aid fell by 1.8%. Though 16 of the DAC countries met the 2006 targets for official development assistance (ODA) set at Monterrey in 2002, aid to sub-Saharan Africa was static in 2006. Total ODA from the DAC member countries came to just 0.3% of total gross national income (GNI), well short of the 0.7% UN recommendation.

Public debt

87

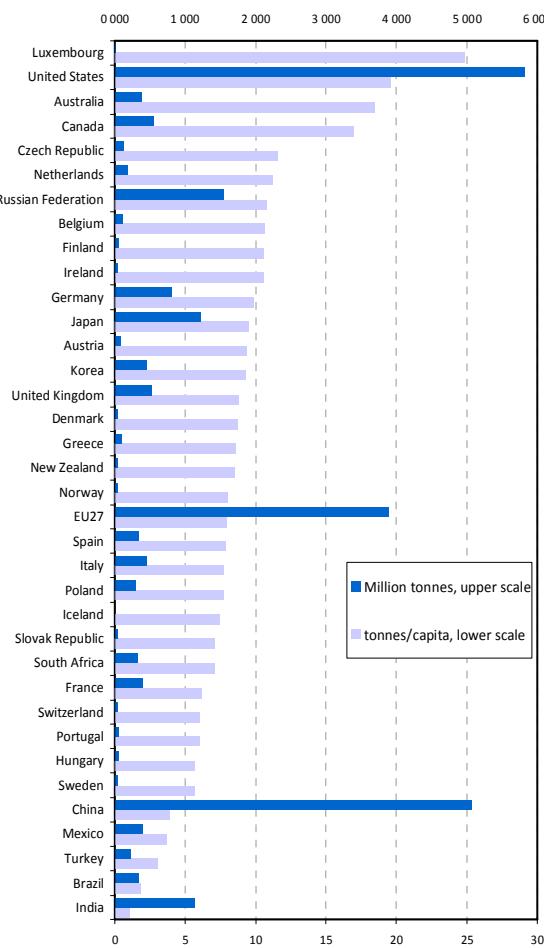

As a percentage of GDP, 2006

In the 1990s a general government debt of 60% of GDP was one of a handful of targets European governments selected as preparation for economic and monetary union, and eventually the euro. As well as central government, it includes debt of local and regional governments, for instance. General government debt had eased in many countries, but, has risen again in several countries on the back of higher global interest rates. The euro area average stood at 76% in 2006, with Italy's at over 100% of GDP, and no less than seven of the euro 12 easily overshooting the original 60% mark, including Germany and France. Interestingly, these countries have also had unspectacular growth. Fast-growing countries such as Ireland and Luxembourg, as well as Korea, were among those countries with the lowest government debt. US debt stood slightly above 60%.

Climate change

Emissions from fuel combustion, total and per capita, 2005

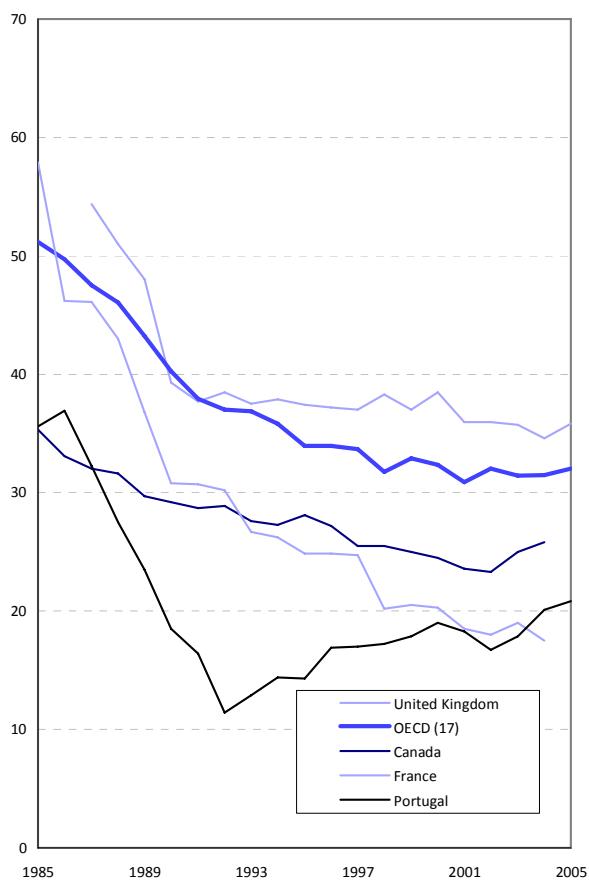

The IEA predicts China's CO₂ emissions will surpass those of the US in 2007! Developing countries' CO₂ emissions are projected to grow faster than those of OECD countries, though in per capita terms OECD emissions will remain 3-5 times higher than those of non-OECD countries for decades to come. The notion of "Shared but differentiated responsibility" as endorsed in the UN Framework Convention on Climate Change calls on industrialised countries to take the lead to reduce greenhouse gas emissions and recognises the right of developing countries to pursue sustainable economic development. This was reaffirmed by the G8. But how to make this principle work in practice? As well as new technology and regulations, a key approach could be for industrialised countries to share the burden of emissions reductions with other countries by using tradeable permits and other market-based mechanisms. Educating medics

89

Number of medical graduates per 1000 physicians, 1985 to 2005

Ageing will boost demand for health care, but as health care professionals are ageing, how can that demand be met? Even with no growth in demand for doctors, retraining of new medics is needed to replace those leaving or taking a break from the profession. That retraining requirement rises sharply when there is some growth in demand for staff, say, as people get older. However, medical graduation rates have been declining over the past 20 years, as the latest *OECD Health Data 2007* shows. The average graduation rate for doctors was about 34 per 1000 practising doctors across the OECD area in 2005. This is too low to meet the expected increase in demand, and raising pressure to bring in doctors from poorer countries where they are badly needed.

General notes

Cut-off date

Cut-off date for the data: May 2007.

StatLink

The OECD's award-winning **StatLink** delivers Excel spreadsheets of the data underlying the tables in this book. Beside each StatLink logo you will find a link or code to the corresponding spreadsheet. The OECD's StatLink uses Digital Object Identifiers (DOIs). To download a spreadsheet, either simply go to the *OECD in Figures* online and click the appropriate link, or type it into your Internet browser. For instance, for background data on GDP, use StatLink: <http://dx.doi.org/10.1787/864662528136>. For more information, visit www.oecd.org/statistics/statlink.

The online version of *OECD in Figures* contains additional information, including footnotes for some items.

Totals and averages

- *OECD total* refers to the OECD countries as a whole.
- *OECD average* is the unweighted, arithmetic average of OECD countries shown in the table.
- EU refers to EU27, unless otherwise specified.
- EU15 refers to the 15 EU member countries prior to May 2004.

Notes and abbreviations

.. Not available or not applicable.

- Nil or negligible.

+ Growth of more than 500%

Data from earlier years

Data are for the year specified or for the latest available year. In the latter case, the data are followed by a number, corresponding to the number of years of difference from the indicated year. For instance, -1 means that the data are one year older than the other figures in the column.

Please consult the source publication specified at the bottom of each table.

Sources of graphs are available on the online edition.

All OECD publications are available at www.sourceOECD.org, the OECD online library. All OECD books can be purchased on www.oecdbookshop.org.

DAC OECD Development Assistance Committee.

EPO European Patents Office.

GDP Gross domestic product. The standard measure of the incomes generated from productive activity in a country.

GNI Gross national income. GNI = GDP + net receipts of wages, salaries and property income from abroad.

ISCED International standard classification of education. A system designed by UNESCO to ensure comparability of education statistics. ISCED classifies various education programmes by their level of education (primary, secondary, tertiary...) and field of education (general programmes, humanities and arts, science...).

LDC Least developed countries, group of 50 countries established by the United Nations. To be classified as an LDC, countries must fall below thresholds established for income, economic diversification and social development.

Mtoe Million of tonnes of oil equivalent. This is defined as 10^{13} kilocalories. This quantity of energy is, within a few per cent, equivalent to the net heat content of 1 million tonnes of crude oil.

NGO Non-governmental organisation.

ODA Official development assistance. Government aid to developing countries designed to promote economic development and welfare. ODA can be bilateral (from one country to another) or multilateral (via agencies such as the UN or the World Bank).

PPP Purchasing power parities (PPPs) are the currency conversion which eliminates the differences in price levels between countries. They are used to compare the volume of GDP in different countries. PPPs are obtained by evaluating the costs of a basket of goods and services between countries for all components of GDP; PPPs are given in national currency units per US dollar (in euro per US dollar for euro area countries).

SNA The Systems of National Accounts includes definitions that ensure international comparability of national accounts aggregates such as GDP.
